The project SOMMER is funded by the European Union under Grant Agreement Number 101118293.

Document Identifier

Grant Agreement No.	101118293		Acronym	SOMMER
Title	Solar-based membrane reactor for syngas production			
Call Topic	HORIZON-CL5-2022-D3-02-06			
Type of action	HORIZON EUROPE, RIA - Research and Innovation Actions			
Start date	01.11.2023	Duration	48 months	
Project URL	https://sommer-project.eu/			
Project Officer	Dr. Luca Bondi			
Project Coordinator	DLR - German Aerospace Center			
Deliverable	D1.6 First Version of Revised Project Management Plan			
Date of Delivery	Contractual	30.04.2025	Actual	30.04.2025
Nature	Report	Dissemination level		Public
Lead Beneficiary	DLR			
Responsible Author	Asmaa Eltayeb (DLR), E-Mail: asmaa.eltayeb@dlr.de			
Contributors	Nicole Neumann (DLR), E-Mail: nicole.neumann@dlr.de			
Reviewers	all			
Final version approval date	30.04.2025			

About the Project

SOMMER aims to develop and demonstrate an innovative carbon-neutral process for syngas production by directly integrating solar energy into a catalytic membrane reactor, facilitating the decomposition of H₂O and CO₂ (e.g., captured from carbon-emitting industries or through direct air capture). This approach enables SOMMER to overcome reliance on fossil-based energy for syngas production, utilizing CO₂ instead of natural gas as a feedstock. Syngas, a critical intermediate for the chemical industry, prompts SOMMER to encompass the entire value chain - from CO₂ provision in a cement plant to syngas formation and further processing into valuable products like DME or methanol. The core of SOMMER's technology is the optimized energy integration of a novel thermochemical conversion process of CO₂ and H₂O in a single step. This process is supported by highly selective catalysts, a dual-phase composite membrane, and a concentrated solar-thermal plant fulfilling the thermal energy demand. The key outcomes of SOMMER involve the experimental demonstration and evaluation of the innovative solar-powered membrane technology. Additionally, it focuses on developing high-performance, cost-effective membranes as pivotal components, elevating the technology to new heights. SOMMER's strategy involves advancing membrane manufacturing through slip-casting, a more mature approach, and additive manufacturing to optimize the effective membrane surface area in the reactor. The concept anticipates future advantages, allowing prolonged and flexible operation by seamlessly switching between two operational cases: I) Purely solar approach at 1500 °C and II) a biogas-supported approach at 900 °C. Furthermore, SOMMER aims to identify the technological, ecological, and economical potential for flexible and highly efficient solar syngas production, contributing to the formulation of a detailed roadmap and providing a foundation for pre-commercialization through subsequent R&D development activities.

Document Summary

The present document, Deliverable D1.6, titled "First Version of Revised Project Management Plan," serves as an updated administrative guide for the EU SOMMER project. Developed within WP1, this revision builds upon the original Project Management Plan (D1.1) by evaluating the project management strategy and assessing its implementation so far. It incorporates any necessary adjustments while ensuring the continued alignment with the project's objectives and requirements. This deliverable updates the original guidelines, decision-making structures, work plans, and management approaches, reflecting the actual progress and current project status.

Changes with Respect to the DoA

The only change with respect to the DoA as per D1.1 is: the duration of WP5 has been adjusted to 44 months to align with the Gantt Chart and the defined duration of Task 5.3 in the Grant Agreement. This adjustment corrects a typographical error in the work package description of the Grant Agreement.

6. Conclusion	8

1. Introduction

This document, D1.6 – First Version of Revision of the Project Management Plan, presents a comprehensive update to the project management strategy initially outlined in D1.1 – Project Management Plan. In D1.1, key information concerning the implementation of the SOMMER project was outlined, including detailed guidelines and procedures. That document remains the central administrative and procedural reference for the project. It encompasses:

- The organizational structure, including defined roles, responsibilities of consortium partners, and decision-making bodies with their respective mandates;
- A detailed work plan, with timelines, milestones, deliverables, tasks, Work Breakdown Structure (WBS), and a Gantt chart;
- Communication procedures, both internal and external;
- Guidelines for monitoring technical and financial progress, including regular reporting mechanisms.

This current revision reflects the project's actual implementation thus far and confirms that the foundational project management strategy remains effective, with no substantial changes required at this point.

2. General Assessment of the Project Management Strategy

Since the inception of the project, the management structures and processes described in D1.1 have proven to be both robust and appropriate. Evidence of this includes:

2.1. Strong Governance and Coordination Structures

Project management bodies are well established and operate effectively. Responsibilities and roles are clearly assigned at all project levels. Regular meetings, in alignment with the D1.1 and Grant Agreement (GA), ensure close monitoring of progress and timely identification of risks—none of which have emerged as critical to date.

2.2. Quality Assurance and Deliverable Management

Standardized review procedures and templates have been effectively implemented. Deliverables are prepared, reviewed, and submitted on time, aligning with the **WBS** and **Gantt chart** as outlined in D1.1. Deliverable formats are consistent and have been positively received by the consortium and reviewers.

2.3. Internal Communication

The internal communication platform, **TeamSite**, has functioned exceptionally well overall. Although some initial login and accessibility issues were encountered—mainly due to organizational security settings—these were resolved early in the project. Since then, TeamSite has proven to be an effective hub for documentation, file sharing, announcements, and team coordination. Users across the consortium have expressed satisfaction with its usability and efficiency.

2.4. External Communication and Dissemination

The SOMMER website (<https://sommer-project.eu/>) and LinkedIn page (<https://www.linkedin.com/company/103495523/admin/dashboard/>) have provided strong visibility and outreach for the project. Engagement with target groups has been growing steadily, with 71 followers on LinkedIn as of now.

2.5. Meetings and Coordination

The **General Assembly** has met regularly every **six weeks**, ensuring a dynamic and engaged project environment. These meetings have been productive, fostering quick decisions and effective follow-up actions. Additionally, Work Package (WP)-relevant meetings have occurred frequently—on-demand but no longer than every three months—ensuring detailed coordination at the WP level.

3. Governance Structure – Personnel Updates

There has been no change in the structure of the project consortium: it continues to consist of four Research Centers (DLR, FZJ, IREC, and CSIC) and four Industrial Partners (hte, MAM, HW, and TITAN), including one Associate Partner (BASF).

However, updates to deputy/proxy representatives have been made:

- **For IREC**, the deputy/proxy representative in the SOMMER General Assembly has changed from **A. Tarancón** to **N. Kostretsova**.
- **For TITAN**, **A. Tsoutalou** has been appointed as the new deputy/proxy representative.
- Additionally, **A. Tsoutalou** has also been designated as the deputy/proxy member of the SOMMER Exploitation Committee.

The completed and updated representatives for the SOMMER General Assembly and Exploitation Committee are shown in Table 1 and, respectively.

Table 1: Updated SOMMER General Assembly Representatives

No.	Organisation	Member	Deputy / Proxy
1	DLR	N. Neumann	A. Eltayeb
2	FZJ	S. Baumann	W. Meulenberg
3	IREC	M. Torrell	N. Kostretsova
4	Hte	S. Schunk	I. Jevtovikj
5	CSIC	M. Balaguer	A. Carrillo
6	MAM HW	M. Rozumek	F. Luthardt
7	TITAN	M. Katsiotis	A. Tsoukalou

Table 2: Updated SOMMER Exploitation Committee

No.	Organisation	Member	Deputy / Proxy
1	DLR	A. Eltayeb	N. Neumann
2	FZJ	S. Baumann (FZJ)	M. Torrell (IREC)
	IREC		
	CSIC		
3	Hte	S. Schunk	I. Jevtovikj
4	MAM HW	F. Luthardt	M. Rozumek
5	TITAN	M. Katsiotis	A. Tsoukalou

4. Deliverables and Milestones

As per the schedule defined in the DoA and D1.1, the following deliverables have been successfully completed and submitted on time:

- **D1.1** – Project Management Plan with Gantt Chart and Work Breakdown Structure
- **D1.2** – Quality Management Plan
- **D1.3** – Launch of project’s website, protected acronym, electronic communications network and social media account.
- **D1.4** – Data Management Plan
- **D1.5** – Dissemination and Exploitation Plan
- **D3.1** – Definition of operational parameters of solar membrane reactor operation (pressure and temperature range), as well as gas compositions
- **D3.2** – Selection of most advantageous approach for pO₂ reduction for case i operation
- **D3.3** – Definition of downstream process parameters
- **D2.1** – Identification of suitable material system for membranes and catalysts

Deliverable **D2.1** serves as confirmation for **Milestone MS1** achievement.

All deliverables submitted to date have adhered to the established formats and templates, ensuring clarity and consistency throughout the project’s implementation so far.

5. Work Breakdown Structure and Gantt Chart

The original Work Breakdown Structure (WBS) and Gantt Chart, as presented in D1.1, remain unchanged and continue to serve as the backbone for planning and task distribution. The Gantt Chart timeline remains on track, with activities being executed according to their scheduled timelines and dependencies. This structured and visual approach has been instrumental in maintaining progress and coordination across the consortium. All planning tools—including the WBS, Gantt Chart, templates, and TeamSite—remain essential for visualizing progress, understanding dependencies, and supporting effective resource planning, with minor scheduling adjustments made as needed without affecting the overall timeline.

6. Conclusion

In conclusion, the original project management framework, as defined in deliverable D1.1, continues to serve the SOMMER project well. Its comprehensive and standardized structure has enabled efficient coordination, effective risk monitoring, and timely delivery of project outcomes. No substantial changes are necessary at this point, although adjustments will be made immediately should the need arise in the future.

According to the GA, the next formal revision of the management plan is scheduled for **Month 30 (April 2026)**. However, the consortium remains committed to proactive adaptation: any significant developments impacting project execution will be promptly documented and communicated.
